SCOPING STUDY ON MATOUSH INDICATES VERY STRONG ECONOMICS

Montreal, November 11th, 2008 - Strateco Resources Inc. ("Strateco") is pleased to announce the first economic assessment of its 100% owned Matoush property located in the Otish Mountains, 260 km north of Chibougamau, Quebec.

The scoping study was conducted by Scott Wilson Roscoe Postle Associates Inc. ("Scott Wilson RPA") with the participation of Melis Engineering Ltd. for capital and processing costs, Golder Associates for radiation, environment and reclamation costs and SD Energy Associates Ltd. (SD Energy) for marketing and price determination.

The scoping study is based on the National Instrument 43-101 compliant indicated and inferred resource estimate established by Scott Wilson RPA in its Technical Report on the Mineral Resource Update for the Matoush Uranium Project, dated September 16th, 2008, based on drilling results as of July 25th, 2008 and does not include results of the ongoing drilling program. Such results will be the subject of an updated NI 43-101 technical report in 2009.

Mineral Resource Estimate for Matoush, July 25, 2008 ^(1,2)

	Tonnes (x 1,000)	Grade (% U ₃ O ₈)	Pounds U ₃ O ₈ (x 1,000)
Indicated			
AM-15	162	0.52	1,840
MT-34	88	0.97	1,890
Total Indicated	250	0.68	3,730

MT-22	801	0.38	6,680
MT-34	527	0.55	6,350
Total Inferred	1,344	0.44	13,070

1. The indicated and inferred resource estimate is contained in the technical report entitled Technical Report on the Mineral Resource Update for the Matoush Uranium Project. (September 16th, 2008)
2. Mineral resources that are not mineral reserves do not have demonstrated economic viability. The scoping study is preliminary in nature. It includes indicated and inferred mineral resources that are considered to speculative geologically to have the economic consideration applied to them that would enable them to be characterized as mineral reserves and there are no certainties that the scoping study will be realized.

The following is a summary of the scoping study results. The complete report will be available on Strateco's website (www.stratecoinc.com) and on SEDAR (www.sedar.com) within 45 days.

I ORE PRODUCTION AND RECOVERED METAL

The mining plan was developed on mineral resources configuration. Recovered metal is based on metallurgical tests done at SGS Lakefield Research Ltd. (Lakefield) in Lakefield, ON; an average of 97.6% recovery is used.

Mr. Guy Hébert, President and CEO said: "Even with significant inflation in operating costs in the mining industry, our Matoush project indicates very strong economics. However, with the recent dramatic correction in the commodity prices it is possible to see our economics improve as input prices decrease. We continue to evaluate different engineering alternatives to enhance the project economics. Results of this scoping study justify the underground exploration program as part of the feasibility study."

Mr. Hébert continued, "We continue to expand mineral resources with an aggressive drilling program, as there have been 17,217 metres drilled on the property since the cut-off date for the Mineral Resources Update of September 16th, 2008.
